

Dr. Venkatraju Jella is currently working as a post-doctoral researcher in the department of Materials Science and Engineering at Chungnam National University, Republic of Korea. He received his PhD from Chungnam National University, Korea. He obtained his Master's degree from Pondicherry University, India. His interests of research include study of dielectric, ferro/piezoelectric materials, thermoelectric materials, organic-inorganic hybrid perovskites, development of single-structured fusion energy harvesting devices, and single-structured multimode sensors.
